

GIVE YOUR DOG WHAT WORKED FOR WINSTON!

WINSTON'S JOINT SYSTEM, derived from nutritional supplements developed for human consumption, addresses common canine joint problems—without steroids, without surgery.

WINSTON'S JOINT SYSTEM is composed of three all-natural whole food supplements, incorporating collagen, bromelain (pineapple enzyme), cartilage, and synergistic herbs among other ingredients (visit our website at www.DOGSHEALTH.COM for a full analysis).

One of the clear advantages of this approach: none of the side-effects which are common with steroids and other conventional pharmaceutical treatments.

WHO WAS WINSTON?

Only the best dog, ever (except, of course, for yours). He was a 15-year old Springer Spaniel who had lost his "spring". Osteochondrosis (OCD) bone chips in his elbow and moderate hip dysplasia made it tough for Winston to get out of his doggie-bed. Some days, he refused to get up at all.

This caused Winston's human friend, Mark, a lot of distress. He had his own problems, namely a major shoulder condition. Over time, a program of natural food supplements helped Mark's shoulder heal. He then asked his naturopathic doctor if the supplements he'd been taking might work on his beloved Winston.

The short answer is "yes".

Since that inspired beginning, we have researched, tested, and refined our canine formula based upon natural whole food supplements developed to treat human joint and bone disorders.

Our commitment is to provide safe and effective pet products that help promote optimum health & longevity. Our pets are our family, and they trust us to provide the same quality products we demand for ourselves.

We won't compromise: we use only the highest quality Human Grade ingredients and manufacture our products at human dietary supplement plants requiring frequent FDA and Human Food GMP approvals.

Winston is no longer dancing on this earth, but thanks to the formula he inspired, his memory is a joyful one.

Dogkind.

They are humankind's oldest companion.

Loss of mobility and chronic to acute pain diminish your dog's quality of life, and yours. When your dog is in pain, it hurts you, too.

Dogs may experience joint problems for many reasons.

- ▶ *SOME BREEDS ARE GENETICALLY PRONE TO PAINFUL HIP DYSPLASIA AND OTHER MUSCLO-SKELETAL PROBLEMS*
- ▶ *IN OTHER CASES, INAPPROPRIATE FEEDING TECHNIQUES CAN RESULT IN JOINT DYSFUNCTION*
- ▶ *OCCASIONALLY, YOUNG DOGS WILL EXPERIENCE LITERAL "GROWING PAINS" AS THEIR SKELETONS MATURE*
- ▶ *OLDER DOGS OFTEN EXPERIENCE ARTHRITIS, BONE SPURS AND DISC DEGENERATION*
- ▶ *DOGS OF ALL AGES AND CONDITIONS MAY TEAR LIGAMENTS OR ENDURE OTHER INJURIES WHICH AFFECT JOINT FUNCTION AND STRENGTH*

WINSTON'S JOINT SYSTEM

is designed to treat:

- Arthritis
- Hip Dysplasia
- OCD
- Ankle and Joint problems
- "Growing Pains"

WINSTON'S JOINT SYSTEM is not a "quick-fix" drug. The effects are long-term, gradual and cumulative. The formula does not contain painkillers or any type of drug, which often mask the symptoms without addressing the source of the problem.

We believe that the interaction of the ingredients builds collagen and articular cartilage, and revitalizes the synovial fluid contained in the joint capsule.

Although many of our clients report measurable results within a few weeks (some even within one week or less), we remind clients that because **WINSTON'S JOINT SYSTEM** is composed of whole food supplements, some dogs will not experience the immediate relief associated with steroids and other anti-inflammatory drugs. Speaking as dog-lovers ourselves, we believe that this is often a reasonable trade-off, since commonly-injected steroids may actually reduce absorption of many elements necessary to build or heal joints.

WINSTON'S JOINT SYSTEM may be appropriate to use in tandem with other treatments and therapies advised by your veterinarian.

HANDS-ON HEALING FOR YOUR DOG

The Formula consists of 4 capsules. The exact dosage—meaning how many times a day your dog should receive the 4-capsule treatment—depends upon the weight of your dog. Specific dosage instructions are included in the product packaging. To make it easier (and yummiier), we recommend wrapping each capsule in a nice gooey bite of cheese or dog treat. (Your pet will love this part!)

And we also recommend that you really rub it in. Really! Accupressure massage is recommended for any hindquarter problems in dogs. Every morning, switch "on" the muscles in your dog's hindquarters with slow, deep fingertip massage. Massage both sides of your dog's spine, along the last 3 or 4 vertebrae, all the way to the base of the tail. Massage firmly enough to get a reaction from your dog—a few minutes will make a big difference.

For the past ten years, thousands of dog-lovers—including professional dog breeders—have told us that **WINSTON'S JOINT SYSTEM** dramatically reduces joint pain and inflammation in affected shoulder, elbow, knee and hip joints, and increases flexibility and strength in their pets.

Here are a few comments from people who use **WINSTON'S JOINT SYSTEM**:

"Our dog Zane's hocks are very bad which I first noticed when he turned six months of age. His rear legs were so close together that he looked as if he had only one rear leg. I started using Winston's when he turned 7 months old and after only 5 days, he began walking more normally, and after 2 months he was a completely new dog. I now give him the Formula twice a day which he will stay on for the rest of his life."

—ELEANOR SOBOLWESKI

"Because of you, we have our dog back. Yesterday, Oso caught a squirrel!!!! (The squirrel will survive and Oso's ego is really on a high!) We're cutting back to a maintenance dosage of every other day, and we'll watch and see how Oso does. Thanks again, we'll pass the message to others."

—LINDA PETERSEN

"I am amazed with the results of Winston's Joint System. My black lab Retha is 12 years old and weighs between 70-75 lbs. We have three stairs she must negotiate to our backyard. Before, she simply would not go. Now, she bounds down the stairs with us to the yard so as not to miss a party. She is now as or more mischevious than she was as a pup. I am so happy I found you on the internet. I want her remaining years to be happy and pain-free. She is my child and the center of our world and I am thrilled with her progress."
